

Game Inspirations:

- Among Us - Simple tasks + Locations + Sabotage
- Mastermind (Boardgame)- 4 colors, 4 locations. Each guess reveals how many are correct color & correct location, correct color & wrong location, and wrong color.
- 5 Nights At Freddy's - Creepy possessed mascots roaming around.
- Call of Duty Zombies - 1st person shooter with slow moving enemies attacking in waves. Purchasing weapons.
- Human Fall Flat/Gang Beasts - Ragdoll
- Blood & Truth - VR gun reloading, houlstering

(The game can be easily adjusted to be as creepy/scary or silly/whimsical as desired).

Game Story Premise: You are a production assistant on a haunted children's TV show (similar to the Teletubbies & Sesame Street). The show is recorded in front of a Una-Live Studio Audience of ghosts. Years ago an accident happened in the studio and the show went horribly wrong resulting in the death of the audience. They can't move on to the afterlife until the show is set up the way it was supposed to be that fateful day. If you don't set up the show the way they like then they possess muppets, puppets, and costumes to attack you. Keep trying until you get it right. Run out of tries or get overwhelmed by enemies and you'll be joining them in the audience.

Gameplay:

1. The TV show is made up of 4 critical elements in 4 critical locations
 - a. Lighting - Up in the Rafters
 - b. Sound/Audio/Music - Back behind the audience in the sound booth
 - c. Set - On the stage
 - d. Pie/Prop - Prop department/Costume department/Green room
2. The Player moves around by teleporting to specific determined locations in the studio. Can use telekinesis glove to interact with far away/out of reach things. (We can also add joystick player movement and more freeing teleportation if desired).
3. At the start of the game a random 4 color code of 6 potential colors is randomly generated and is unknown to the player (Mastermind). The player can change the color of each element. These are simple but fun interactions similar to Among Us tasks.
 - a. Lighting - Swap out Gel colors
 - b. Audio - Plug in correct cable alignment/ music sliders combo. (Each song type is tied to a color ex. Blue == Jazz, Yellow == Pop) Sign nearby displays what combo is what song/color. (Can be random generated or not)
 - c. Set - Wheel in correct set location from offstage to onstage. (Set pieces are color coded ex. Red == Fire Truck, Green == Garden) They are flat stand ups with wheels.
 - d. Pie/Prop - Change pie flavor in mixture for "Pie in the face gag". (ex. Red == Cherry, Blue == Blueberry)

4. The Player only has 2-3 minutes to set up their guess before the countdown clock to showtime ends and the curtains open, cameras turn on, and the show is live. The player can trigger to go live early if they so choose.
5. The Audience then reacts in one of 2 ways:
 - a. You correctly guess the ghosts applaud and go on to the after life
 - b. You guessed wrong. 4 spots are displayed and then you are attacked by a wave of enemies.
 - i. Red - Correct color, correct location
 - ii. White - Correct color, wrong location
 - iii. None - Wrong color
6. You only have 9 chances to correctly guess the code or you lose the game. Record of guesses and results is kept and displayed at a location in the studio.
7. Each wrong guess results in a large wave attack of enemies. When attacked you are stuck in place or in a small zone.
8. With each wrong guess the waves get harder. The waves also get harder the closer to the correct code you are. If you are killed by the wave you also lose the game.
9. After the wave finishes the 2-3 minute countdown to showtime starts over again.
10. A small number of enemies will also occasionally sabotage the critical locations during the countdown. The player has to fix it or it will be a blank in their guess that round. These are simple but fun interactions similar to Among Us tasks. You will be notified by walkie talkie.
 - a. Lighting -
 - i. Drop light fixture == use rope to pull back up
 - ii. turn of circuit breaker == turn on circuit breaker
 - iii. Unplug wire == plug in wire
 - iv. Breaks light bulb == replace light bulb
 - b. Sound
 - i. Knock over speakers == put speakers upright
 - ii. Swap cables == fix cables
 - iii. Unplug wire == plug in wire
 - c. Set
 - i. Graffiti set == paint over it
 - ii. Break off piece == nail/screw back on
 - iii. Rotate stand-up so it's backwards to audience == rotate forward
 - d. Pie/Prop
 - i. Turn off mixing machine == turn on mixing machine
 - ii. Eats batter == put flour and fruit back in
11. Player can defend these locations by shooting roaming enemies during countdown and setting up traps but that takes up time (maybe costs money)
 - a. Sandbag rope grab
 - b. Sandbag fall
 - c. Trap door
 - d. Electric puddle
 - e. Spring trap

- f. Big fan
12. Player has to manually reload the cartridge for the gun stored on the waist and/or chest. The player can also holster weapons at waist and/or back. The player can buy weapons and ammo with money from killing enemies and/or finding cash around the studio. Weapon purchase on walls like Call of Duty Zombies or at a single location like the stunt department/closet/prop room).

Potential Game Additions:

1. Release object or weapon with controller near face to have character bite down to hold/carry it in their mouth.
2. Reach over shoulder to swap weapons (Blood & Truth)
3. Reach over your shoulder to grab your backpack. Inside the backpack are weapons and/or items and/or power ups.
4. When hurt one arm can go limp and noodly until healed.
5. Heal over time or buy/find medpacks from studio first aid.
6. Story easter eggs, audio logs, documents, environment changes, secret compartments, collectables can spawn at different hidden locations depending on the color combo set by the player. Ex. Guessing (red,red,red,red) spawns a collectible red script in the directors chair that you can read in the menu, Guessing (red,yellow,green,blue) causes the janitor door to unlock and open for environmental storytelling.

Extra Game Notes:

- Color code guess setup part breaks up repetitive waves of enemies to prevent the game from getting stale.
- Time limit and multiple tasks creates player urgency, resource management, and time management.
- The Game can very easily have different difficulty levels by adjusting enemy aggression, resources, health, task complexity, and allotted time.
- Game is very replayable and has a set end time. Players will also look for hidden lore/collectables.
